### Orchestrator Integration for vSphere version 6.0

Until now for or companies who have upgraded their VMware vSphere estate to version 6.0 and were looking to automate vSphere with System Center 2012 R2 Orchestrator their only integration option was to use Power CLI. Although integration in vSphere using Power CLI was possible the commands were complex to execute from within Orchestrator.

The VMware vSphere Integration Pack from Kelverion simplifies the whole integration and automation challenge of vSphere from within Orchestrator by providing a set of robust forms Integration Pack Activities.

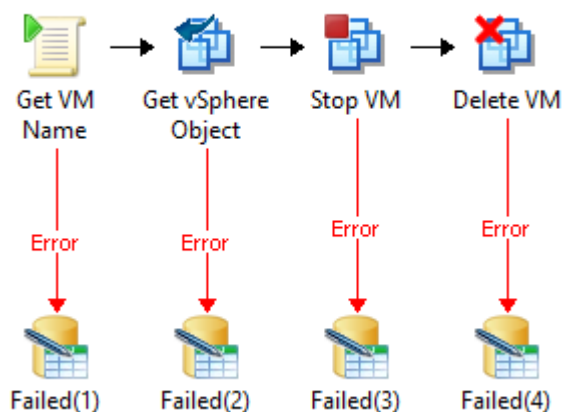

The Integration Pack for VMware vSphere is a compliant integration for the Microsoft System Center 2012 Orchestrator IT Process Automation Solution.

The Integration Pack enables pre-defined integration and automation capabilities associated with provisioning and managing VMware vSphere Virtual Machines.

The Integration Pack delivers activities to automate IT Functions such as:

#### Delete VM

**Automated Provisioning** - Automate the creation of resources in vSphere directly from Service Requests or automated resource scaling.

Retire Virtual Machines to free up resources and reclaim licenses for re-use.
