

Kelverion

Kelverion Management Server

Licence Management for Azure Automation Integration Modules

The Kelverion Management Server provides the license service for Kelverion Integration Modules for Azure Automation.

Due to the Platform as a Service nature of Azure Automation there is currently no method to integrate Kelverion Integration Modules into Microsoft Azure billing processes.

Therefore to use the Integration Modules for Azure Automation a Kelverion Management Server will be required with a Kelverion Module License

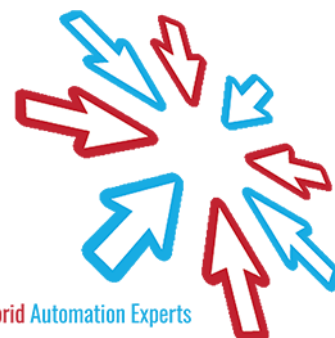

The Management Server will consist of an Azure Virtual Machine running Windows Server 2012 R2. This VM will host a Kelverion Web Service application which will provide the licence validation functionality.

Once the Azure VM is configured you provide the Server ID to Kelverion and we will issue you a Module License file which will enable the operation of the Integration Modules you have purchased.

Once you have deployed the licence file to the Management Server you can configure the Integration Modules to talk to the Kelverion Management Server. You create a new Smart Connection which will be used by the Integration Module and then during the Connection creation you define the Management Server connection details and then they will operate correctly.

Kelverion are a Microsoft System Center and Cloud Partner who offer Integration Packs and Tools to enhance System Center Orchestrator and Azure Automation and deliver System Center implementation services.
