## Integration Pack for Windows Automation

### Automation of User Interaction

The Kelverion Integration Pack for Windows Automation is a compliant integration for Microsoft System Center 2012 R2 Orchestrator or System Center 2016 Orchestrator.

It provides Orchestrator with the ability to automate user interaction with an Application via its User Interface.

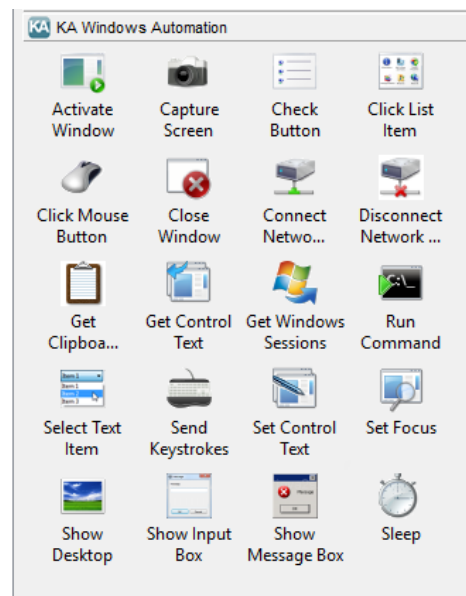

Many legacy or Mainframe Applications have no Application Programming Interface (API). The only way of entering data or interacting with the application is by typing in fields in a User Interface and clicking buttons. This makes interacting with these applications a manually intensive and time consuming task.

The Integration Pack delivers a range of re-usable Activities enabling automatic interaction with an Application by simulating keystrokes, mouse movements and windows/control manipulations through a client component which can be installed on a Windows system. This way it is possible to automate IT-Functions such as:

#### Automated Mainframe Application Population

Automated control of a mainframe application by interacting with the system via its user interface, accessible by a TN3270 emulator running on the Orchestrator Runbook server or a remote machine such as a Windows Desktop Device

#### IP FOR WINDOWS AUTOMATION ACTIVITIES

Kelverion are a Microsoft System Center and Cloud Partner who offer Integration Packs and Tools to enhance System Center Orchestrator and Azure Automation and deliver System Center implementation services.
